

MDXUNI wireless connection guide

Android devices

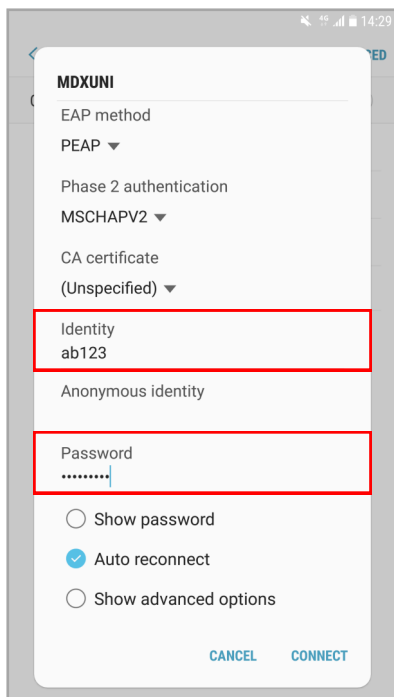

This guide will show you how to connect to the **MDXUNI** wireless network on an Android device. The screenshots below are taken from a Samsung Galaxy S7 running Android 7.0, so the instructions may differ slightly depending on your Android device and firmware.

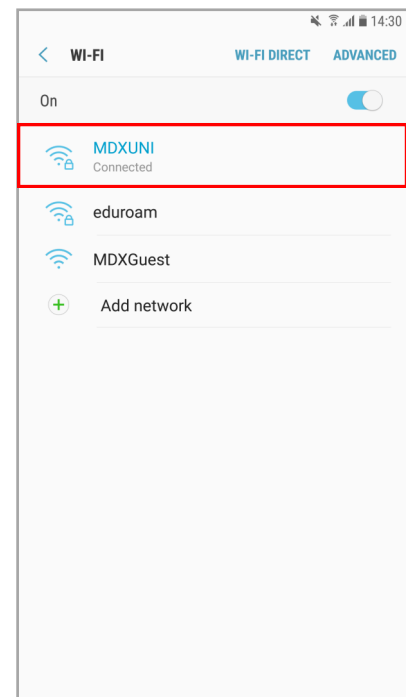

1. Go into the wi-fi settings on your Android device, and ensure that wi-fi has been turned on. You will see the **MDXUNI** network available—tap on it to begin connection.

2. On the MDXUNI connection settings screen, ensure that the EAP method is set to **PEAP**, and that Phase 2 Authentication is set to **MSCHAPV2**.

3. Enter your **user ID** (e.g. ab123) under **Identity**, and then your password—leave the Anonymous identity section blank. Then, tap on **Connect**.

4. After a few seconds, you should be connected to the **MDXUNI** network—the wi-fi icon will then be visible on the status bar of your device, indicating a successful connection.
