## **Eduroam wireless Windows 10 guide**

What is **eduroam**? It is a free wireless service which allows students and visitors to access the internet when visiting participating institutions.

The list of all participating UK organisations can be found at this link:

## https://www.eduroam.org/where/

If you want internet access when visiting another University, you need to connect to the **eduroam** network with your **Middlesex University** credentials. You only need to do this once - you will then connect automatically whenever you visit any participating **eduroam** University.

Before you travel to an alternative destination, we would recommend you try accessing eduroam whilst at Middlesex University just to confirm authentication. Please <u>do not use</u> the eduroam service (which will be visible at Middlesex University) when you are on your home Campus as this is only for visiting students and academics. You should only use **MDXUNI**.

**Step 1:** Click on the Wi-Fi icon on your Windows 10 taskbar - it should indicate the Wi-Fi connections available. Click **eduroam.** 

**Step 2:** Make sure the **Connect Automatically** box has been ticked, then click on the **Connect** button.

**Step 3:** Type your **Middlesex University** student email **Username** e.g. **AB123@live.mdx.ac.uk** followed by your **Password.** Click **OK** and then click on the **Connect** button.
